

Notes 11/15 @ 7:15 pm:

- Wenbo getting help with his local commit on github
- We got help with github commands
- Went over what progress we have made since the last meeting
 - Finished testing trip advisor and login api routes
- Mae shared her screen and showed her index.js including the test cases for the labs
- Bhoomika explained how we can try to debug our errors / told us to go to office hours if we need help
- We all worked on part A and Part B of the lab together
- Emmy: this week figured out how to get the container to stay up and running after tests were run. Upcoming week: front-end development and setting up pages using css. Will focus on nav-bar and including a "company" logo to include
- Noah: implemented trip advisor api
 - Demoed how it works on the website
 - Explained how the latitude and longitude
 - Implemented axios call that takes in latitude and longitude
- Mae: this week worked on part a and part b of the lab. Reviewed noah's pull request and decided to just merge 2 files to the main branch. Next week she will work on front end and ejs for discover and mytrips page
- Wenbo: this week worked on user database and how to access user data: username and password and id to link to trips. Next week will work on trip cards database
- Andrew: worked together with the rest of the group to try and debug the errors we got from the test cases on part A and part B. Worked on the login sample test for the UAT plans. Next week Andrew will work with Wenbo to create the database for the mytrip advisor cards
- Need to add user story points to everything on board
